ABSTRACT OF THE INVENTION

A ballast, or power supply circuit, for gas discharge lamps of the type
using IC control based gate-drive circuitry for controlling a pair of serially
connected switches of a d.ca.c. inverter. More particularly, the invention
relates to a ballast having a resonant feedback circuit drawing continuous
input current from a wide range of source voltages to satisfy requirements of
phase control dimmers. Even more particularly, the invention relates to a
universal platform for phase dimming discharge lighting using the Ballast and
a discharge Lamp with a phase dimming circuit.
